The Manager
STARWALLS
Port Elizabeth

Dear Geoff

PRODUCT EVALUATION

Herewith our findings and impressions of your products as evaluated by our company.

1. **MODUTEQ** (Optic Fibre Detection Unit)
 - Unit was found to be well constructed and simple to install and operate.
 - We were impressed with the unit's ability to "learn" it's environment
 - Once set up correctly the system was remarkably stable without loosing the ability to detect "learnt" conditions.

2. **INSENSE** (Palisade Detection Unit)
 - This unit too has a professional finish and was simple to install
 - The unit was very effective at detecting movement or tampering with the structure to which it was attached.
 - We feel that this product can play an important role in providing early detection of intrusions but does need to be in a controlled environment where nuisance alarms will not be generated by human or animal traffic.

With the significant rise in crime it is our impression that both the abovementioned products will play an important role in the prevention and/or detection of intrusions

Yours Faithfully

Mark Vimpany
(Technical Manager)
